

LIGHTNING DETECTOR

INFORMATION

DID YOU KNOW!?

Several of our City Parks have Lightning Detector Systems that will alarm with one long horn blast accompanied by a strobe light if lightning has been detected within a 10-mile radius. New this year, you can check the status of the weather online before even leaving the house by simply clicking on the parks below!

Bridge Park
Bristol Bay
Beecher Park
Riverfront Park

Please note, if lightning has been detected, all parks, fields and playground should be evacuated until Lightning has not been detected for a minimum of 30 minutes and the "All Clear" has been given either online or by 3 short horn blasts at the Park.

As with any weather technology, these systems are not an exact science. Please use common sense when visiting a park and leave the park when you see lightning or hear thunder regardless of whether you hear the lightning alarm.
